

AKUEN AKOI DENG

Software Engineer | Machine Learning Engineer | Distributed Systems Engineer

+46 700 357 212 | akuiendng@gmail.com | [LinkedIn](#) | [GitHub](#) | Stockholm, Sweden

SUMMARY

Aspiring research graduate with experience in technical and theoretical research, Software Engineering, Machine Learning, and CyberSecurity. Built AI-based performance-aware low-level systems, MCP servers, RAG-based systems, Agentic workflows, distributed systems, Internet of Things, and fullstack web platforms using Python, Java, C/C++, JavaScript, Docker, Kubernetes, and modern machine learning frameworks.

EDUCATION

Stockholm University <i>M.Sc. in Computer and Systems Science</i>	Aug. 2024 – Jun. 2026 Stockholm, Sweden
University of Gothenburg <i>B.Sc. in Software Engineering and Management</i>	Aug. 2021 – Jun. 2024 Gothenburg, Sweden

PROFESSIONAL EXPERIENCE

University of Gothenburg <i>Teaching Assistant</i> Guided student project groups through planning, collaboration, and implementation, providing technical support and coaching in Systems Development (DIT113) and Team Programming (DIT094).	Oct. 2022 – Jun. 2023 Gothenburg, Sweden
Chalmers Teknologkonsulter AB <i>Software engineer</i> Worked across technical delivery and stakeholder-facing activities, including implementation, solution discussion, and product improvement.	Nov. 2022 – Jun. 2023 Gothenburg, Sweden

RESEARCH & PUBLICATION

Master thesis <i>Adaptive AI Task Partitioning and Offloading in Heterogeneous Edge-Cloud Networks</i> Grade: B Accepted in ARES 2026 Conference	Jan. 2026 – Jun. 2026 Stockholm, Sweden
Bachelor Thesis <i>Deep learning camera-based heart rate detection in vehicles using non-functional requirements.</i> Grade: VG (pass with distinction)	Mar. 2024 – Jun. 2024 Gothenburg, Sweden

PROJECTS

REAP: Runtime Energy-Aware Adaptive Partitioning and Offloading Framework [GitHub] - Designed and implemented an adaptive DNN partitioning framework for distributed inference across edge-cloud network. - Optimized model split selection using runtime latency, network conditions, and energy consumption in a heterogeneous end-edge-cloud environment.
Virtual Diabetes Clinic Triage [GitHub] - Engineered a FastAPI-based Machine Learning service that predicts diabetes progression risk scores to support patient triage and follow-up prioritization. - Implemented prediction and health-check endpoints, a dashboard for ranking patient records by risk, and Dockerized deployment with MLOps and CI/CD automation.

TECHNICAL SKILLS

Languages: Python, C, C++, Rust, Java, JavaScript
AI/ML: PyTorch, TensorFlow, NumPy, Pandas, scikit-learn, Claude, codeX, RAG, MLOps, Distributed inference
Fullstack: Django, FastAPI, Node.js, Vue.js, React
Security: Threat modelling, Federated Learning, Pen-Testing, Linux, Nmap, Metasploit
Others: Docker, Kubernetes, Google Cloud, GitHub Actions CI/CD, Vercel, Latex, Quantum programming (Qiskit)
